- Single or dual cash drawers
- Operates stand alone, via a modem or on-line as part of a store wide system
- Supports dedicated or shared printers for kitchen & bar printing
- Supports bar code scanners, magnetic card readers, scales, customer displays

General Description

The VersaTerm VMR series till is the entry-level low cost point of sale terminal for fast food outlets, sporting venues, & franchise operations. The VMR series includes injection moulded plastic housing giving a sleek, stylish and practical design.

VersaTerm is intelligent & does not rely on a permanent host computer connection for operation. All critical operations & peripheral devices are supported internally, thus providing security & peace of mind for retail users.

If a VersaTerm is running stand alone (via a modem, the host computer is being used for something else or there has been a computer or communications failure) full sales transaction data is stored in the VersaTerm & transferred to the host computer automatically, as soon as communications are established or restored.

Installation is simple and low-cost, using Category 5 twisted pair cabling. The Intelligent Control Module controls up to 32 VersaTerms or V-touch units on a single daisy chained branch, which can run up to 1km from the host computer system, or alternatively the VersaTerms can connect to the host computer via modem.

All memory is non-volatile, an additional battery option is available enabling full operation of the VersaTerm for up to two hours in the event of a power failure.

V-touch and VersaTerm, VMR Series, VL Series and VM Series tills can be used together on the same installation.
